IMPATIENS 'Fisimp 225'/'Fisupnic Chersweet'

17A) Origin and breeding history of the variety

'Fisimp 225' was derived from a hybridization made in 2000, and was selected as one seedling within the offspring in the spring of 2001.
The female parent was the variety 'Alexis' and the male parent was the seedling no. K-00-6162-2.

The hybridization was made in HILLScheid, Germany, and the seed was taken to Galdar, Gran Canaria, Spain, where the first selection of the seedlings was conducted.
Cuttings from the selected seedling were taken back to HILLScheid for further selection and trial cultivation.

The selection criteria were the flower shape (large, flat and almost round), the begin of flowering (about medium), and over medium to tall sized and well-branched plant habit – in combination with a range of flower colours.

17 B and E) Statement of uniformity and stability
Methods for maintaining the variety

Variety 'Fisimp 225' originated from a single seedling that was propagated asexually. It is a uniform clone without genetical variation. Off-types have not been observed so far.

The variety will be multiplied by shoot tip cuttings from selected stock plants that appear to be uniform and stable in Galdar, Gran Canaria, Spain.

17 C) Distinctness statement

The most similar variety is 'Fisimp 130, commercially 'Sonic Sweet Cherry'.

In comparison to 'Fisimp 130', 'Fisimp 225' has a more vigorous growth habit, and larger flowers with a more distinct, red, star-shaped pattern.
